16 October 1998

WATER PURVEYORS, CENTRAL VALLEY REGION
(See Attached List)

California Water Code Section 13272.1 requires that Regional Water Quality Control Boards publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). Enclosed is a copy of the complete Region 5 list and the quarterly update for July, August, and September 1998. You will note that a majority of the sites are Leaking Underground Storage Tanks (LUST) at service stations. Also enclosed is a reply card for address corrections and additions to the mailing list.

The definitions of the report headings are:

Reporting Activity - These represent regulating units within the Regional Board that investigate and assist with remediation of LUST sites in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = sites with Federal permits).

Site Name, Address, City, Zip - Location where MTBE (and other contaminants) has been found.

Case Number - This is the LUST Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Case Type - Refers to the known extent of the contamination. "SOIL" = limited to soil only. GW = groundwater contaminated. SURF = surface water contaminated. WELL = drinking water well has been contaminated. UNKN = extent of contamination is as yet undetermined.

Remediation Status

LEAK RPT - The first step in the process - a Leak Report filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

PAR - a Problem Assessment Report has been completed. Site conditions are defined.

FRP - a Final Remediation Plan has been approved.

REMED ACTION - Remedial Action - the work described in the FRP is being done.

VERI MONITOR - Post Remediation Verification Monitoring.

Our mission is to preserve and enhance the quality of California's water resources, and ensure their proper allocation and efficient use for the benefit of present and future generations.

WATER PURVEYORS, CENTRAL VALLEY REGION
(See Attached List)

California Water Code Section 13272.1 requires that Regional Water Quality Control Boards publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). Enclosed is a copy of the Central Valley list. Please note that we have lowered the MTBE reporting ranges to 5 parts per billion (ppb), the recently adopted taste and odor threshold. Also enclosed is a reply card for corrections to the mailing list and comments you may have to improve our process.

The report headings are:

Reporting Activity - This represents the Regional Board programs that investigate, and remediate fuel storage tanks in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = Federal Discharge Permits, LUST = leaking underground storage tanks).

Site Name, Address, City, Zip - Location where MTBE and other contaminants have been found.

Case Number - This is the Leaking Underground Storage Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Case Type - Refers to the current contamination status: "SOIL" = limited to soil only. GW = groundwater contaminated. SURF = surface water contaminated. WELL = drinking water well has been contaminated. UNKN = extent of contamination is as yet undetermined.

Remediation Status

LEAK RPT - The first step in the process - a Leak Report filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

PAR - a Problem Assessment Report has been completed. Site conditions are defined.

FRP - a Final Remediation Plan has been approved.

REMED ACTION - Remedial Action - the work described in the FRP is being done.

VERI MONITOR - Post Remediation Verification Monitoring.

WATER PURVEYORS, CENTRAL VALLEY REGION

S → BL

MTBE DISCHARGES IN THE CENTRAL VALLEY REGION

California Water Code Section 13272.1 requires that Regional Water Quality Control Boards publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). Enclosed is a copy of the current Central Valley list. Please note that the MTBE taste and odor threshold is 5 parts per billion (ppb).. Also enclosed is a reply card for corrections to the mailing list and comments you may have to improve our process.

The report headings are:

Reporting Activity - This represents the Regional Board programs that investigate, and remediate fuel storage tanks in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = Federal Discharge Permits, LUST = leaking underground storage tanks).

Site Name, Address, City, Zip - Location where MTBE and other contaminants have been found.

Case Number - This is the Leaking Underground Storage Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Case Type - Refers to the current contamination status: "SOIL" = limited to soil only. GW = groundwater contaminated. SURF = surface water contaminated. WELL = drinking water well has been contaminated. UNKN = extent of contamination is undetermined.

Remediation Status

LEAK RPT - The first step in the process - a Leak Report filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

PAR - a Problem Assessment Report has been completed. Site conditions are defined.

FRP - a Final Remediation Plan has been approved.

REMED ACTION - Remedial Action - the work described in the FRP is being done.

WATER PURVEYORS, CENTRAL VALLEY REGION

MTBE DISCHARGES IN THE CENTRAL VALLEY REGION

California Water Code Section 13272.1 requires that Regional Water Quality Control Boards publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). The third quarter 1999 report unintentionally omitted approximately 120 sites due to a data error during conversion from dBase to MS Access databases. We, in effect, had a "pre-Y2K" problem. The missing data has been restored and is contained in this report. Also enclosed is a reply card for corrections to the mailing list and comments you may have to improve our process.

The report headings are:

Program - This represents the Regional Board programs that investigate, and remediate fuel storage tanks in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = Federal Discharge Permits, LUST = leaking underground storage tanks).

Site Name, Address, City, Zip - Location where MTBE and other contaminants have been found.

Case # - This is the Leaking Underground Storage Tank Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Type - Refers to the current contamination status: "Soil" = limited to soil only. GW = groundwater contaminated. Surf = surface water contaminated. Well = drinking water well has been contaminated. Unkn = extent of contamination is undetermined.

Remediation Status

LEAK - The first step in the process - a Leak Report has been filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

SAU - Site assessment underway

PAR - a Problem Assessment Report has been completed. Site conditions are defined.

WATER PURVEYORS, CENTRAL VALLEY REGION

MTBE DISCHARGES IN THE CENTRAL VALLEY REGION

California Water Code Section 13272.1 requires that Regional Water Quality Control Boards publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). Also enclosed is a reply card for corrections to the mailing list and comments you may have to improve our process.

The report headings are:

Program - This represents the Regional Board programs that investigate, and remediate fuel storage tanks in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = Federal Discharge Permits, LUST = leaking underground storage tanks).

Site Name, Address, City, Zip - Location where MTBE and other contaminants have been found.

Case # - This is the Leaking Underground Storage Tank Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Type - Refers to the current contamination status: "Soil" = limited to soil only. GW = groundwater contaminated. Surf = surface water contaminated. Well = drinking water well has been contaminated. Unkn = extent of contamination is undetermined.

Remediation Status

LEAK - The first step in the process - a Leak Report has been filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

SAU - Site assessment underway

PAR - a Problem Assessment Report has been completed. Site conditions are defined.

FRP - a Final Remediation Plan has been approved.

WATER PURVEYORS, CENTRAL VALLEY REGION

MTBE DISCHARGES IN THE CENTRAL VALLEY REGION

California Water Code Section 13272.1 requires Regional Water Quality Control Boards to publish and distribute, on a quarterly basis, a list of dischargers of Methyl Tertiary Butyl Ether (MTBE). Enclosed is a reply card for corrections to our mailing list and comments you may have to improve our process. We are placing the quarterly update of this list on our WEB page. Please review it and provide comments: www.swrcb.ca.gov/rwqcb5

The report headings are:

Program - This represents the Regional Board programs that investigate, and remediate fuel storage tanks in our Region. (AGT = above ground tanks, SLIC = spills & pipelines, NPDES = Federal Discharge Permits, LUST = leaking underground storage tanks).

Site Name, Address, City, Zip - Location where MTBE and other contaminants have been found.

Case # - This is the Leaking Underground Storage Tank Information System (LUSTIS) database case number. Sites lacking case numbers are referenced by address.

Type - Refers to the current contamination status: "Soil" = limited to soil only. GW = groundwater contaminated. Surf = surface water contaminated. Well = drinking water well has been contaminated. Unkn = extent of contamination is undetermined.

Remediation Status

LEAK - The first step in the process - a Leak Report has been filed with the Regional Board.

PIER - Preliminary Investigation & Evaluation Report submitted to Regional Board.

SAU - Site assessment underway

PAR - a Problem Assessment Report has been completed. Site conditions are defined.
